On Diagnostic Experiments for Fuzzy Automata

D. V. Speranskiy

Moscow State University of Railway Engineering, Russia, 127994, Moscow, Obraztsova st., 9, bld. 9, Speranskiy.DV@gmail.com

The concept of a generalized diagnostic experiment for fuzzy automata is introduced. A method constructing diagnostic experiments for fuzzy automata is proposed. The method is based on diagnostic tree structure. It is established that the problem of diagnostic experiment synthesis is a multi-criteria optimization problem.

Key words: diagnostic experiment, fuzzy automata.
